Hackathon Winner at APAC Level

Hackathon Winner at Org Level

Aditya Chaudhari

Senior Software Engineer @NewFold Digital
Bengaluru, Karnataka, India

Summary

I'm a backend and platform-focused software engineer with experience designing and scaling cloud-native systems. I specialize in building microservices architectures, improving deployment velocity, and enabling teams through reusable frameworks and automation.

In my current role, I led the migration of a legacy monolith to a Kubernetes-based Spring Boot microservices platform, reducing deployment time from 1 hour to 5 minutes and enabling on-demand releases. I built reusable service templates and shared libraries adopted by 4+ teams, with 10+ microservices running in production.

I've also worked on high-scale systems supporting 10K+ concurrent SSE connections, migrated 20K+ users to new architectures, and drove a 30% reduction in AWS infrastructure costs through targeted optimizations (Fargate Spot, environment right-sizing).

My interests include distributed systems design, observability, scalable backend architectures, and platform engineering.

Experience

Newfold Digital

3 years 2 months

Senior Software Engineer

April 2024 - Present (2 years 1 month)

Mumbai, Maharashtra, India

Led development of MCP tools using FastMCP (Python) and Spring Boot APIs, integrating them into an agentic chatbot to enable action-driven responses and reduce customer support requests by 10%.

Increased upsell conversions by 8% by engineering a conditional catalog system that dynamically renders components based on domain ownership and product eligibility.

Initiated phased migration of a legacy Apache Struts monolith by building a Kubernetes-based Spring Boot microservices platform and reusable Spring Boot microservice template, reducing deployment time from 1 hour to 5 minutes and enabling new services to be provisioned in minutes.

Accelerated microservice development by creating a shared Spring Boot library standardizing authentication, caching, persistence, and third-party integrations, enabling adoption by 4+ teams with 10+ services deployed to production.

Eliminated frontend redeployments by implementing a dynamic UI configuration service (Spring Boot, Oracle DB, Cloudflare), enabling runtime UI changes without release cycles.

SDE 2

March 2023 - April 2024 (1 year 2 months)

Mumbai, Maharashtra, India

Unified Platform Integration: Led the consolidation of Bluehost, HostGator, and Domain.com into a unified technology stack, delivering \$25M+ in cost savings while ensuring seamless customer experience and minimal disruption.

Microservices Modernization: Architected and led the decomposition of a monolithic application into Kubernetes-based microservices, improving development velocity by 20% and significantly enhancing scalability and deployment speed.

Shared Platform Engineering: Designed and implemented a shared internal library that reduced boilerplate code by 30%, standardized system integrations, centralized core service calls, and improved long-term maintainability.

Team Leadership & Mentorship: Onboarded and mentored three engineers, conducting design reviews, PR feedback sessions, and technical upskilling initiatives to accelerate team productivity and code quality.

Newfold digital

Full Stack Engineer

June 2021 - May 2023 (2 years)

Mumbai

Build & CI/CD Optimization: Reduced local build times by 75% and CI pipeline execution time by 40% by optimizing Webpack configurations and AWS CodeBuild workflows, significantly accelerating development cycles.

Production Stability Enhancement: Resolved a critical memory leak in a Node.js service by implementing clustering and runtime optimizations, doubling system availability and improving overall resilience.

Infrastructure Modernization: Identified and implemented high-impact infrastructure improvements across AWS and Jenkins/OKD environments, enhancing system reliability, scalability, and operational efficiency.

Real-Time Microservice Architecture: Designed and launched a scalable server-sent events (SSE) microservice to power real-time event streaming, improving user experience by 30% and supporting high-concurrency workloads.

Micro Frontend Standardization: Established organization-wide standards for micro frontend architecture and deployment, streamlining React/Webpack 5 builds and improving cross-team consistency and release efficiency.

Cloud Cost Optimization: Led a comprehensive infrastructure analysis initiative, implementing optimization strategies that reduced AWS and monitoring costs by 30%+ without impacting performance.

Platform Feature Delivery: Played a key role in multiple production releases, architecting and integrating critical capabilities including notifications, uptime monitoring, staging environments, and bulk email services.

Observability & Incident Automation: Strengthened monitoring and alerting workflows using Datadog and CloudWatch; automated incident response processes to reduce mean time to resolution (MTTR).

Endurance International Group

Full Stack Engineer

January 2021 - May 2021 (5 months)

Mumbai, Maharashtra, India

Billing System Modernization: Redesigned and migrated invoice calculation logic from frontend to backend, improving system accuracy, maintainability, and increasing user engagement by 10%.

API & Feature Enablement: Designed and implemented scalable CRUD APIs to manage plugin, theme, and WordPress core site configurations, driving a 40% increase in feature adoption.

Frontend Performance Optimization: Enhanced user experience and reduced unnecessary API calls by implementing debouncing strategies in React-based interfaces.

Endurance International Group

Software Developer

June 2020 - July 2020 (2 months)

India

- User Identification: Identified internal users based on subnet ranges and categorized them as test users. (SpringBoot)
- Test Case Modernization: Modernized the test case writing process by introducing JUnit5 and upgrading existing test cases. (SpringBoot)
- API Testing Automation: Automated API testing within CI/CD pipelines using Robot Framework.

Lembark Solutions

Android Developer

June 2018 - July 2018 (2 months)

Surat Area, India

Android App Development: Developed calculator and photo-editing Android applications. (Java SE)

Education

NIRMA UNIVERSITY

Bachelor of Technology - BTech, Information Technology · (2018 - 2021)

Dr.S.& S.S.Gandhi college of Engg. And Technology, Surat 612

High School Diploma, Information Technology · (2015 - 2018)
